

The Kobelco logo is displayed in white, bold, sans-serif capital letters within a teal rectangular box in the top left corner.

KOBELCO

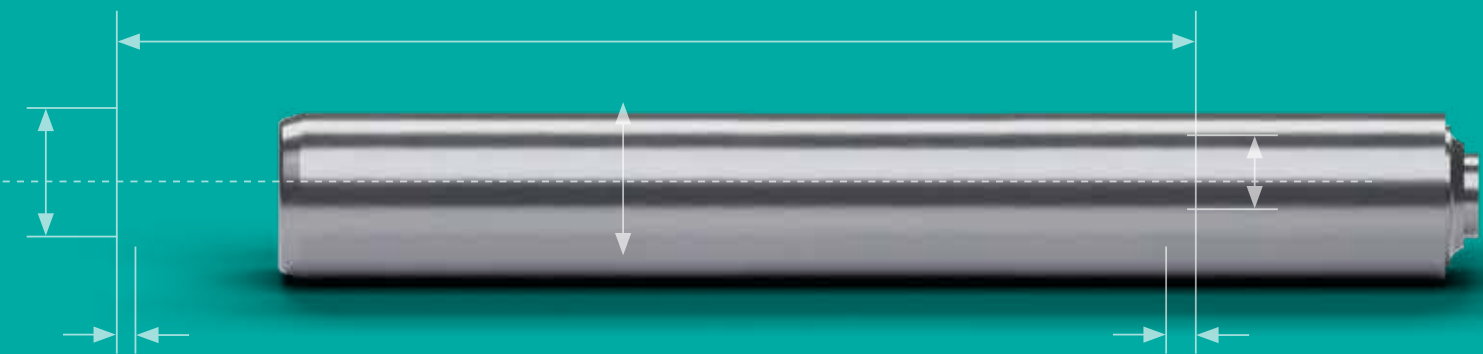

A black and white portrait of a man with a beard and short hair, looking directly at the camera with a serious expression. He is wearing a dark sweater over a collared shirt. The background is a blurred construction site with an excavator visible in the distance.

Built for Perfectionists™

KOBELCO CONSTRUCTION MACHINERY EUROPE B.V.

The difference is in the detail.

“

Forging our own path while staying true to our heritage”

It is over a decade since KOBELCO Construction Machinery Europe (KCME) re-established its business in Europe and we are proud of what we have achieved in that time. Our dealer network has expanded to over 60 dealers and 270 outlets in more than 60 countries and in January 2026, we celebrate another milestone by moving our European headquarters to a much larger, purpose-built site in the Netherlands.

We have come a long way, and yet we stay very close to our roots in Japan. Almost a century after our parent company built Japan's first construction machine, KOBELCO Construction Machinery Ltd. is known worldwide as a leading specialist in crawler

excavators, cranes and demolition machines. Outstanding manufacturing quality has always been our hallmark. A key part of our promise to you is that every machine sold by KCME is built at one of KOBELCO's state-of-the-art factories in Japan. Our people take pride in our long heritage of craftsmanship. Despite our growth, we operate as a close-knit family where everyone shares the same passion for innovation, attention to detail and customer satisfaction.

Of course, technologies and challenges evolve constantly, and faster now than ever before. We are embracing changes in lifestyles, ways of working, the global climate and the environment

surrounding our business. We are leveraging the latest developments in robotics, automation and connectivity to improve our products, processes and services. And we continue to take a hands-on approach, quickly identifying what you need and providing new solutions.

Looking ahead, we are excited to further reinforce KCME's commitment to the European market. By forging our own path while staying true to our heritage, values and aspirations, we will continue to deliver on our core promise: to go beyond your expectations.

Built for Perfectionists™

At KOBELCO, we believe in the power of hard work to change landscapes and make the world a better place. Our equipment is built to make that work possible. KOBELCO demolition machines, crawler excavators and cranes are a familiar and trusted sight wherever development is happening. They are preferred by customers for their incredible reliability and lasting value. For operators, they are the ultimate workplace, meticulously crafted for a unique feeling of comfort, control and confidence. For our designers and engineers - who follow an engineering philosophy based in critical thinking, problem-solving, precision and continuous improvement - every component is a source of pride. Some people work to live. KOBELCO people also live to work. The difference is in the detail.

The pursuit of perfection

We envision a world in which people, now and in the future, can fulfil their hopes and dreams while enjoying safe, secure and prosperous lives.

Our daily work is guided by three core values that sustain that vision and drive our progress:

1. We provide technologies, products and services that win the trust and confidence of the customers we serve and the society in which we live.
2. We value and support the growth of each individual employee, while creating a cooperative and harmonious environment.
3. Through continuous and innovative change, we create new value for the society of which we are a member.

The right equipment for every jobsite

In cities, harbours, forests, mountains and quarries,
at sea and at the heart of dismantling and recycling
facilities... wherever development is happening,
you will find us.

Quality manufacturing: every detail counts

Every machine sold by KOBELCO Construction Machinery Europe is built at one of our four world-class production facilities in Japan. This is a vital element of our quality guarantee. Regardless of their speciality, every worker in our factories shares the same engineering philosophy and meticulous mindset. The pursuit of perfection drives every stage of machine development, from the first design sketch to the last bolt.

Our Japanese production sites

Okubo Factory, specialising in crawler cranes

Ogaki Factory, birthplace of our hydraulic mini excavators

Itsukaichi Factory, home of our medium to large-sized hydraulic excavators

Numata factory, manufacturing quality parts and components

The perfect balance of quality and productivity

Our factories leverage advanced automation technologies alongside human craftsmanship for manufacturing processes that combine productivity, flexibility and inspiration. Quality control is integrated throughout our systems. This includes initial checking of materials and procured parts, testing within each process and final inspection of the completed product.

Quality confirmation using measuring instruments

Production line process inspection

Perfecting transfer welding technique

Research & Development: perfection is a process

For KOBELCO, perfection is both the journey and the destination. Our quest to keep providing the best possible machinery for the job is what drives every new design, feature, component and service, right down to the smallest detail. This requires relentless commitment to research and development. It means embracing the latest technologies and thinking creatively about how to apply them for the benefit of machine owners, operators and wider society.

Collaboration and co-creation

We promote open innovation and cooperate with the research laboratories of Kobe Steel (our parent company) as well as various universities. By sharing our knowledge, we promote wider sharing of expertise within our industry in areas such as materials, strength, processing technology, mechatronics technology and vibroacoustic technology. These partnerships are vital in helping us to translate next-generation technologies into practical applications that add value to our products and to society.

Development of electric control

3D CAD

Design review

Engine altitude testing at 4,310 metres

Vibration and acoustic testing

Research & Development: customer-driven innovation

By continuously listening to feedback, analysing it and deepening our expertise in every sector of our market, we are able to conduct research from the perspective of the people who buy and use our machines. This is key to the development of products that don't just meet existing needs but anticipate future trends to keep our customers ahead of the game.

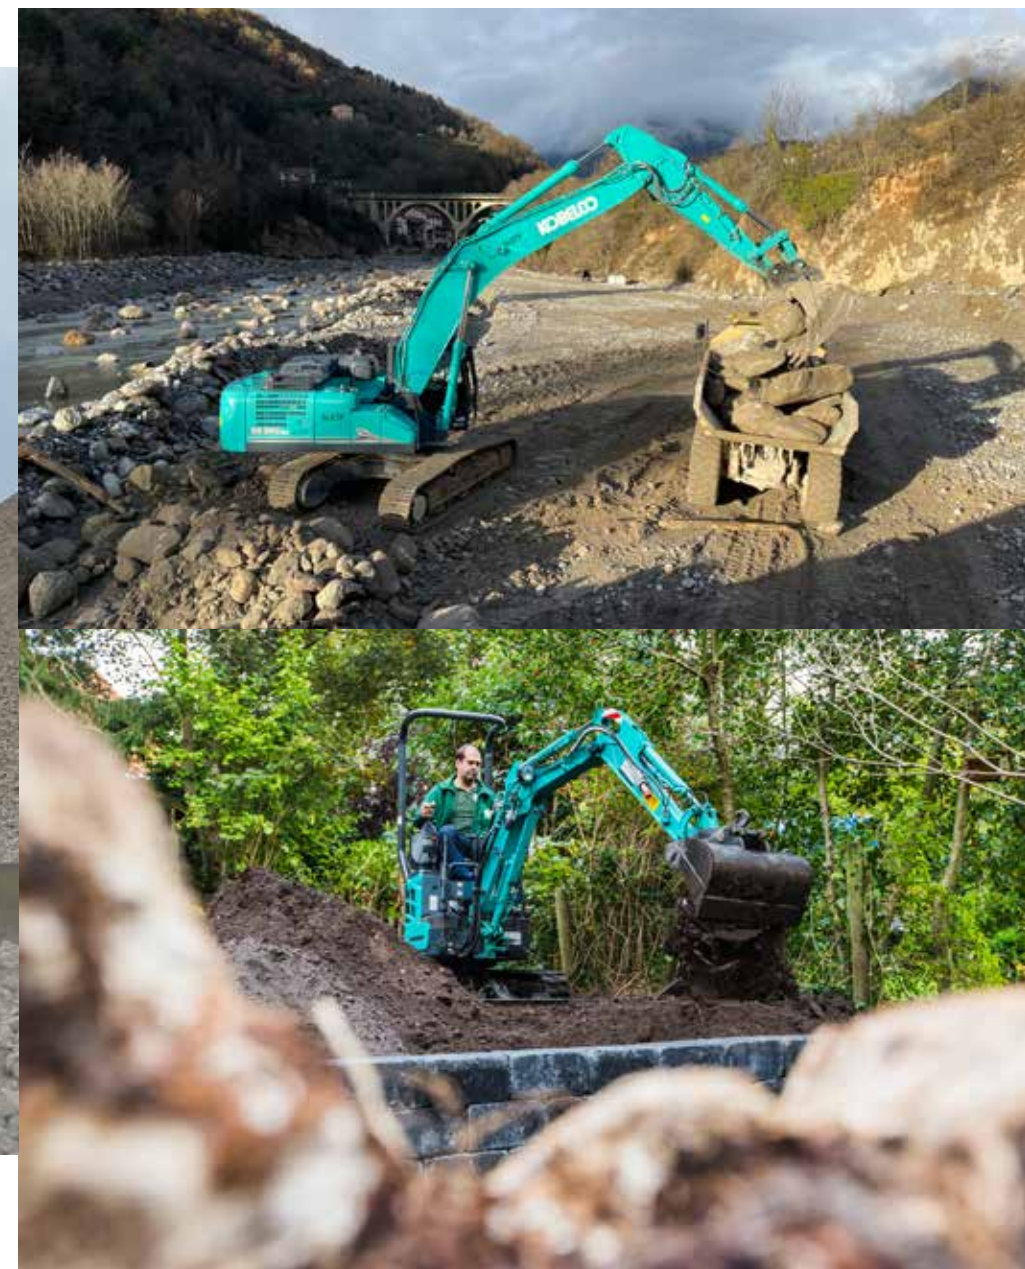

We believe construction equipment must work alongside humanity, harmonising with our cities and landscapes. That means going above and beyond to protect people and the environment. We made history when we introduced the world's first hybrid excavator to the market in 2009. Human safety and well-being drive innovation in every aspect of our machines, from ergonomics and visibility (with our Performance x Design concept) to reducing noise and dust (iNDR).

Our K-DIVE® system facilitates remote operation anywhere in the world and our anti-collision assist system detects people close to the machine, alerts the operator and even stops the machine automatically to avoid an accident.

Our engineers embrace the newest digital and communications technologies to create the future of construction. We have developed tailored remote monitoring systems (KOMEXS &

K-CROSS) for every machine range to manage fleets, optimise fuel efficiency, track productivity and pre-empt performance issues (K-SCAN). K-Load prevents truck overloading, while our Autonomous Loading System boosts both productivity and site safety. Specifically for the demolition sector, the NEXT Attachment system enables safe, efficient assembly, disassembly and transportation of machine attachments.

The perfect machine for the job

Over the decades, KOBELCO has developed a unique range of machinery that enables businesses and individual operators to keep raising their own benchmark for efficiency, safety, productivity and work satisfaction. From compact excavators that shape urban infrastructure to gigantic demolition machines that clear the way for new development, KOBELCO equipment is shaping the future.

DIG

Excavators in every shape and size

DISMANTLE

Equipment for demolition and recycling

LIFT

Cranes that raise the performance bar

DIG

The KOBELCO range of excavators is unmatched for versatility and performance. Alongside our renowned conventional series of crawler models, you will find compact and mini machines, our industry-leading short radius models and the world's first combined digger-dozer.

Mini-excavators
SR Series
Conventional models
Bladerunner

DISMANTLE

As Japan's leading manufacturer of demolition excavators, we forged our reputation in a land where buildings can withstand earthquakes, tsunamis and typhoons – but not KOBELCO equipment. At the more intricate end of the scale, our dismantling machines strip vehicles and white goods quickly and precisely, ensuring that nothing goes to waste.

**Demolition
Recycling**

LIFT

KOBELCO's hydraulic lattice-boom and telescopic crawler cranes are known for their robust construction, reliable performance and outstanding comfort for operators. Engineered to excel in efficiency and endurance, they deliver enhanced productivity along with the industry's lowest cost of ownership.

Our special colour

You know an icon when you see one.

Some things in life don't need explanation. They have been tried, tested and loved for so long that they're part of the landscape. Through hard work, long service and their own individual style, they have become classics. Their quality is universally accepted and instantly recognisable – just the colour is enough.

Safety first

Our signature colour reflects our vision, which has safety at its core. In the fast-paced world of construction machinery, where people and machines operate side by side, safety is not just essential – it's imperative. That's why Every decision we make is driven by an unwavering commitment to protecting those on the job.

Harmony between machinery and society

KOBELCO construction machinery is developed with a 'city-conscious' approach. The goal is to create machines that not only function efficiently but also blend seamlessly with urban life – in both design and purpose. They should harmonise with the cityscape, integrate into local communities, and complement everyday lifestyles.

Rather than disrupting the environment, our equipment is designed to coexist with it. Our special colour reflects this vision, symbolising our commitment to balance, harmony and sustainability in construction machinery development.

JUST THE COLOUR IS ENOUGH

Our path to carbon-neutral construction

Sustainability has always been at the core of our innovation. As part of our journey toward carbon-neutral construction, we continue to develop hybrid, hydrogen-driven and fully electric excavators, optimising engine performance while embracing alternative energy sources. By continuously refining our designs and manufacturing processes, we strive to create a more sustainable future without compromising on power, precision or reliability.

Quiet, clean, and powerful

Our electric excavator lineup, led by the compact SK20SRe and the mid-sized SK90SRXe, offers sustainable power without sacrificing performance.

The SK20SRe is perfect for indoor or tight-space jobs, delivering zero emissions and ultra-quiet operation in a compact, agile design. Ideal for urban construction or interior demolition, it offers clean performance where traditional machines can't go.

The larger SK90SRXe brings advanced electric power to heavy-duty applications, combining KOBELCO's signature short radius design with strong digging capabilities and zero on-site emissions. It's a smart choice for environmentally sensitive zones and future-focused projects.

Together, these models represent KOBELCO's commitment to cleaner, quieter and more efficient construction machinery.

Pioneering sustainable construction

KOBELCO Construction Machinery has unveiled a prototype of a hydrogen fuel cell-powered excavator, marking a significant stride toward carbon-neutral construction equipment. Developed in collaboration with Toyota, this mid-sized hydraulic excavator integrates Toyota's advanced fuel cell system and hydrogen tank and delivers zero CO₂ emissions. Its only byproduct is water.

Initial operational assessments have demonstrated that the prototype matches the performance of conventional diesel models, offering comparable movement speeds. Notably, it operates with significantly reduced noise and vibration levels, enhancing operator comfort. The absence of high-temperature emissions also minimises heat-related impacts on surrounding components.

KOBELCO is committed to refining this technology, aiming to achieve continuous excavation and loading capabilities on a par with traditional machines. This initiative is part of KOBELCO's broader strategy to diversify power sources—including battery-electric and wired-electric options—to meet the evolving demands of various construction sites and contribute to a greener future.

HVO: cleaner power, same performance

KOBELCO construction machines are fully compatible with HVO (Hydrotreated Vegetable Oil), a renewable diesel alternative that significantly reduces CO₂ emissions without compromising machine performance. Using HVO in place of traditional fossil diesel helps to lower the carbon footprint of construction operations, while maintaining the reliability, efficiency and durability KOBELCO is known for. No modifications are needed—just fuel up and go green.

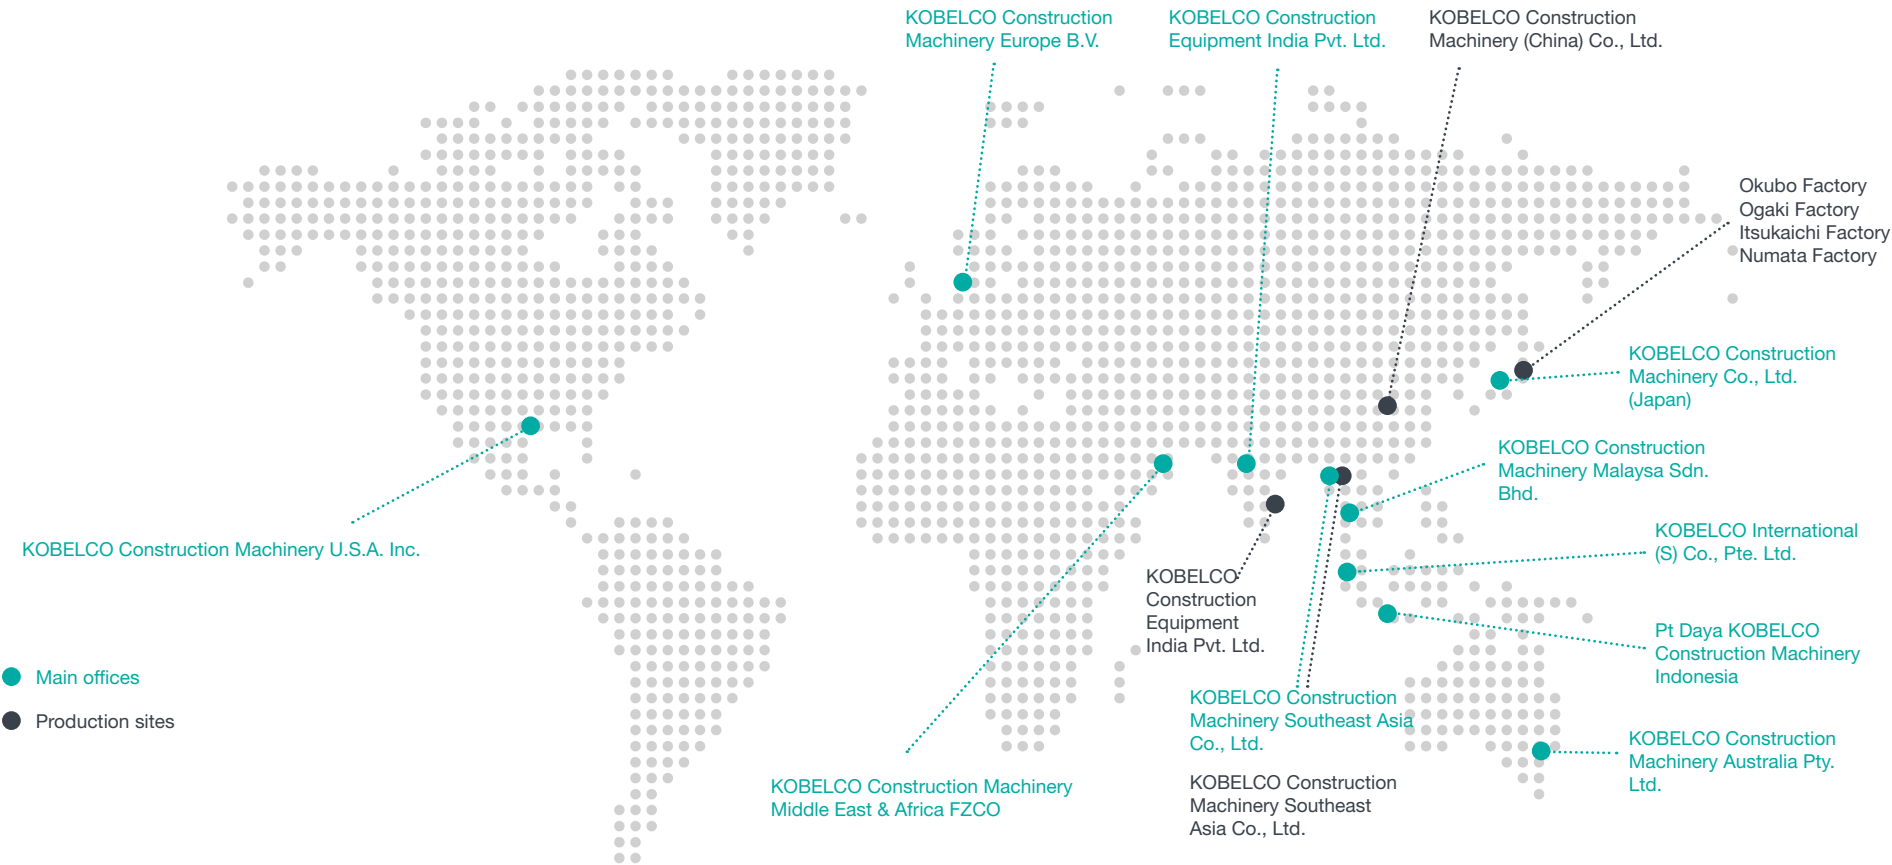

Continuous power for a greener future

KOBELCO's wired electric excavators offer a practical, zero-emission solution for sustainable construction. Powered directly by an external power source, these machines eliminate the need for fuel, reduce operational costs and produce no exhaust emissions.

Ideal for long-duration tasks in fixed locations—such as tunnels, factories, car dismantling plants and urban jobsites—wired excavators provide consistent, quiet performance while supporting decarbonisation goals. With no downtime for battery charging, they're both efficient and eco-friendly.

The KCME family: global support on a local scale

While preserving world-leading quality standards all around the globe, we like to stay close to our customers. We are rapidly growing our presence in Europe and the Maghreb so that dealers and end customers can find everything they need close to home. The KOBELCO Construction Machinery Europe B.V. (KCME) headquarters in Lelystad, Netherlands, provides efficient, responsive services and full aftersales support for our European customers through a comprehensive network of trusted, authorised dealers across 270 outlets in more than 60 countries.

Aftersales services

Our portfolio of aftersales services is designed to support dealers, owners and users of our equipment in getting the most out of the KOBELCO experience. The web-based KOBELCO Monitoring Excavation System (KOMEXS) provides remote monitoring and machine data for efficient, productive and cost-effective fleet management. Our online training platform, KOBELCO Cast gives dealers access to professional training on the equipment and technologies they sell. We also offer numerous training opportunities and digital resources to support safe, responsible, productive and cost-efficient operations across the construction industry.

Extended Warranty Programme

All new KOBELCO machines are delivered with a standard factory warranty. Customers can also benefit from an Extended Warranty Programme designed to offer complete peace of mind by covering any issues that should occur outside of the standard warranty period.

KOBELCO Genuine Parts

We pride ourselves on the use of high-quality components and manufacturing processes, and we apply the same rigorous design, fabrication and testing standards to spare parts as to our original equipment. Through our European dealer network, we provide a reliable supply of KOBELCO Genuine Parts with friendly, knowledgeable sales support and fast delivery times. We want to ensure that everyone using KOBELCO machinery enjoys the highest level of performance, durability and fuel economy with minimal downtime for repairs and maintenance.

Technical support

KOBELCO technicians are available in every major European country to support customers with the most complex technical issues and requests. We also provide technical assistance through an extended network of dealers and specialist service partners. We are committed to making sure that customers have fast, reliable access to technical support, wherever they are located.

Our people, our strength

At KOBELCO, our employees are the heart of everything we do. Their passion, dedication, and expertise drive our achievements and shape our company culture. In this section, you'll hear directly from our team members as they share what makes working here truly special. Get to know the people behind our success!

“

I love my job because it constantly presents me with new and exciting challenges.

- Ahmed,
Warehouse Operations Manager

After 11 years at KOBELCO, I continue to find satisfaction in my daily work. Every day brings new challenges, but also a sense of accomplishment that keeps me motivated. What truly makes a difference is the incredible team I work with. Our warehouse team isn't just a group of colleagues – we're like family. We support each other, work together seamlessly, and push one another to be our best.

This strong bond fuels our motivation and reflects the strength that defines us as a company. At KOBELCO, we don't just meet expectations, we strive for perfection in everything we do. We build for perfectionists.

“

I love my job because it constantly presents me with new and exciting challenges.”

- Lara,
Retail Sales & Marketing Manager for Italy

I love my job because it constantly presents me with new and exciting challenges, keeping my work dynamic and engaging. Every day is an opportunity to learn, grow, and push myself further. Beyond the work itself, I have the chance to meet many people, building meaningful connections along the way.

What makes it even more rewarding is the incredible team around me. I'm fortunate to work with amazing colleagues who create a supportive and inspiring environment, making every day enjoyable.

“

I have loved excavators since childhood – I played with excavator toys instead of cars!”

- Masahiro,
General Manager Product Support

I still vividly remember the excitement I felt watching heavy machinery at work in my hometown in Japan. This passion led me to study mechanical engineering at university and ultimately pursue a career in this industry

The reason I chose KOBELCO over other excavator companies is quite personal. My relative owned a taxi company next to KOBELCO's old factory in Hiroshima, Japan, so I grew up familiar with the brand. It may sound like a coincidence, but it's a true story!

I've been fortunate to gain extensive experience working in the service team, where I've been involved in field activities, product support, service planning, and training. Now, I'm excited for my next challenge—leveraging my experience to establish the European Tech Centre, including a dedicated training academy!

“

At KOBELCO, help is always just a phone call away.”

- Xenia,
General Manager Brand Marketing and Communication

At KOBELCO, I have the opportunity to work with an amazing brand and with some fantastic people. Having worked in the industry for a long time, Kobelco can pride itself on being a specialist. It starts with our colour, our heritage from Japan, diverse team (did you know we have more than 20 different nationalities working at our office in the Netherlands?!) and runs all the way up to our durable products and dedicated dealer network. Help is always just a phone call away.

From a brand perspective, KOBELCO is really special. We don't manufacture a wide range of products, which allows me as a brand manager to focus on what is really important – delivering the 'Built for Perfectionists' message to the European market and continue to build the brand through its core values and continuous improvement.
